

CLENA BY NAME CLEANER BY NATURE...

Our ongoing commitment to sustainability and the environment

CLENA BY NAME...

Clena Supplies always strive to be the preferred supplier of cleaning equipment, hygiene consumables and disposable protective wear to the sectors we serve. We value every existing and prospective customer and treat them with equal respect and integrity at all times, providing a market leading level of service through continual analysis and improvement of all our business operations.

Honesty is the key principle in all our dealings with customers, suppliers and any other business associates. Integrity is demonstrated through consistency in all of our business activities, offering you complete peace of mind.

CLEANER BY NATURE...

Our ongoing commitment to sustainability and the environment is a key part of our ethos. Years of experience allow us to advise customers on the most appropriate products to reduce their own environmental impact.

In order to qualify for '*Clena's Ideology & Mandate*' accreditation (**CLIM8**), non-concentrate chemical products must either 'automatically qualify' by already bearing the Nordic Swan or European Eco Label accreditation symbol, or must meet with **at least eight** of the key scoring criteria, including all mandatory criteria, set out in this guide.

When purchasing any **CLIM8** accredited product you can enjoy total peace of mind. Look for this marque of approval as you browse our complete range.

OUR ECO CRITERIA...

We endorse the use of chemical concentrate products which reduces packaging, storage space, frequency of deliveries and thereby the overall carbon footprint of the products. However, we recognise that these products are not always viable in every situation and the **CLIM8** accreditation provides users with a qualified standard by which to make environmentally sustainable procurement decisions. **CLIM8** looks at factors from raw materials to chemical usage to determine a product's ability to bear its accreditation. **CLIM8** accredited chemicals are produced in the UK in factories that have bulk storage facilities for raw materials to reduce carbon footprint, and where waste effluent is processed through bio generators that degrade waste into carbon dioxide and water before being released into the environment. The containers that **CLIM8** approved products are supplied in are readily recyclable into many goods such as: garden furniture and fencing, litter and recycling bins, pipes, oil bottles, pens and floor tiles. Any aerosols within the scheme only use compressed air as the propellant (no CFC's or other nasties).

Mandatory scoring criteria:

- Manufactured at ISO14001 accredited plants
- Manufactured at ISO9001 accredited plants
- Contains no CFC's

Non-mandatory scoring criteria:

- Is Eco-label accredited
- Is Nordic Swan accredited
- Produced in factories where waste effluent is reduced to carbon dioxide and water
- Contains no phosphates
- Contains no chlorinated solvents
- Not tested on animals
- Fully biodegradable
- Part of a system that reduces product consumption
- Raw materials from renewable sources
- Manufactured at an IPPC (Integrated Pollution Prevention and Control) licenced site
- Meets requirements of the Detergents Directive for biodegradability
- Packaging material from recycled sources

Catering Products

Many catering area cleaners and sanitisers, imperative to safeguard against the spread of bacteria in food prep areas, are included in our range of environmentally sustainable solutions.

Floorcare Products

The Mangrove floorcare range covers all floor types, from carpets and soft surfaces to non-slip and industrial floor coverings, with CLIM8 approved products available for all applications.

Handcare Products

Protect the environment whilst maintaining your own most valuable assets – your hands! Hand cleansers are washed straight into the waste water stream so making an environmentally sustainable choice is critical.

Washroom Products

Washroom surfaces - a source of many unpleasant germs and bacteria - can be maintained with our range of CLIM8 accredited products and with no compromise to cleaning performance and sanitisation.

Housekeeping Products

Using products with reduced carbon footprint and strong sustainability credentials, front of house, communal areas, and public spaces can be maintained to a high standard with fully accredited products.

Industrial Products

For deep cleans and tough cleaning tasks the industrial range comes into play delivering powerful cleaning performance balanced with a gentle touch to the environment, using only bio degradable materials.
